

SOVCON GROUP

Grounded in Values. **Driven to Grow.**

AI-Optimised Grounds™ – Smarter Care for Every Property

At SovCon Group, we believe great grounds care goes beyond mowing and maintenance — it's about knowing **exactly what your landscape needs, when it needs it.**

Our **AI-Optimised Grounds™** system uses smart data and digital mapping tools to monitor lawn health, growth rates, and weed activity across each property. Instead of relying on fixed schedules, the system helps us **predict changes before they happen** — like faster grass growth after rain or early signs of weed spread.

This allows our team to plan work more efficiently, reduce unnecessary site visits, and keep your property in **consistent, peak condition all year round.**

For clients, that means:

- **Lower maintenance costs** through smarter scheduling.
- **Healthier lawns and gardens** thanks to timely attention.
- **Fewer disruptions** and more reliable service.
- **Data-backed transparency** — you can see exactly how your property is performing.

AI-Optimised Grounds™ is a first in Melbourne's maintenance industry — blending technology with SovCon's family values of care, respect, and reliability. It's how we make your outdoor spaces look their best — **efficiently, sustainably, and intelligently.**
